

ACT!

Attachment Freedom

Krishna to Arjuna

Have Attachments the way you want

"Be free from the binding influence of attachments."

Change the path of attachments stored within ACT!

You may find yourself bound to specific folders for your attachments. Even if you move the attachments they do not automatically move in ACT! Here is an enlightened path - a tool which will give you freedom to change the paths at will.

Better than Best Software's [Attachment Migration Wizard](#)

	Attachment Migration Wizard	Attachment Freedom
You can specify that you would like All attachment paths changed to a specific path. Otherwise, you must specify each path one by one. There could be hundreds!	NO	YES
Automatically validates the paths of attachments - so you can tell if they will actually work!	NO	YES
Can process Code 100's (regular notes with paths in them) or Code 101 Attachments.	NO	YES
You can edit, delete, or archive old Attachments	NO	YES
Select the path to replace in certain files, even those with the	NO	YES

same starting path.		
Generates a report of the output, so you can review what it did later.	NO	YES
Sometimes multiple documents are listed in a string of attachments. These can be processed as if they were entered individually, one in each row.	NO	YES

Attachment Freedom does not modify the attachment or its actual location, only the attachment link stored in ACT!

If you have moved the folder containing your attachments or remapped your server, the Attachment Fixer will reconnect the paths from ACT! to these attachments.

For example, you have remapped your server drive letter from S to the new mapping of drive Z, you can use the Attachment Migration Wizard to fix the links to these documents.

The top portion of the Select Attachment Paths screen displays a list of all of the possible attachment paths in the database you selected. It also displays sub-paths to give you the option to change all attachments on one drive, to another, or any subfolder therein.

Warning: The Attachment Migration Wizard will find and replace all instances of the path specified in the top window with the path specified in the "New Attachment Path" field. For instance, the above example would change all attachments that contain "C:\Program Files\Symantec\act4" to "C:\Program Files\ACT"

Note: There is no free technical support available by phone for this product. ACT! Technical Support does not support usage of this add-on. If you have problems or need assistance with this tool, fee-based consulting is available from ACT! Database Services

* Attachments may be material possessions, or anything in the changing relative world of existence which distract a seeker of enlightenment from the higher good and benefits of unity consciousness.
